

Project 6-25 bespaart tijd en kosten en levert impactvolle CO₂ reducties

Niels Penninx, programmamanager Project 6-25

Industrial Heat & Power

October 12th 2021

Versiondate: 10/10/21

OK... But what's the benefit of joining P625?

"Energy Efficiency is the only option"

 **25** Hans van der Spek

"CAPEX is no issue"

Victor Donselaar

"Victor is right!"

 **25** Maarten van Werkhoven

"Feasible technology is available"

 **STORK**
A Fluor Company
Martijn Hinderdael

"Feasible technology is available"

 **KSB**
Bert den Hollander

"Feasible technology is available"

 **enerGQ**
Rob Burghard

"Feasible technology is available"

 **HeatMatrix**
TURNS WASTE HEAT INTO PROFIT
KONINKLIJKE **vemw**
Kenniscentrum en belangenbehartiger van zakelijke energie- en watergebruikers

"Why Join?"

There's more barriers

Energy Efficiency projects don't make it to the **boards' table**

The nature of Energy Efficiency projects requires **capacity that is unavailable**

In house expertise is lacking

Invasive technologies pose a risk that weighs high in project prioritisation

Subsidies are not always fully included in the **businesscase**

Technically & economically **feasible solutions***

Off balance **financing**

Energy Efficiency is the **only viable CO2 reducing option on short term**, prices ↑, pressure from society ↑

* Project 625 offers technologies with a payback period <5 years whereas for many cases the threshold for realisation is ~2.5 years unless strategic

Barriers which P625 also tackles

Management attention

1. We seek board commitment, create scaleable multi-technology projects that are on the agenda

Organisational capacity at no cost

1. Organisational capacity to build your CO₂ reduction programme
2. Streamlining of multiple supplier engagement: preselection & validated technology
3. Flexibility to adapt to existing initiatives and partners

Expertise at no cost

1. Technical advice for scoping, project development & implementation
2. Knowledge on solid businesscase development, project prioritisation & financing
3. Access to a network with peers

Risk mitigation

1. P625 Technologies are proven TRL8/9 and implementation ready
2. Service partners are experienced and specialised in the technology portfolio
3. De-Risking options readily available (ESCO performance guarantees)

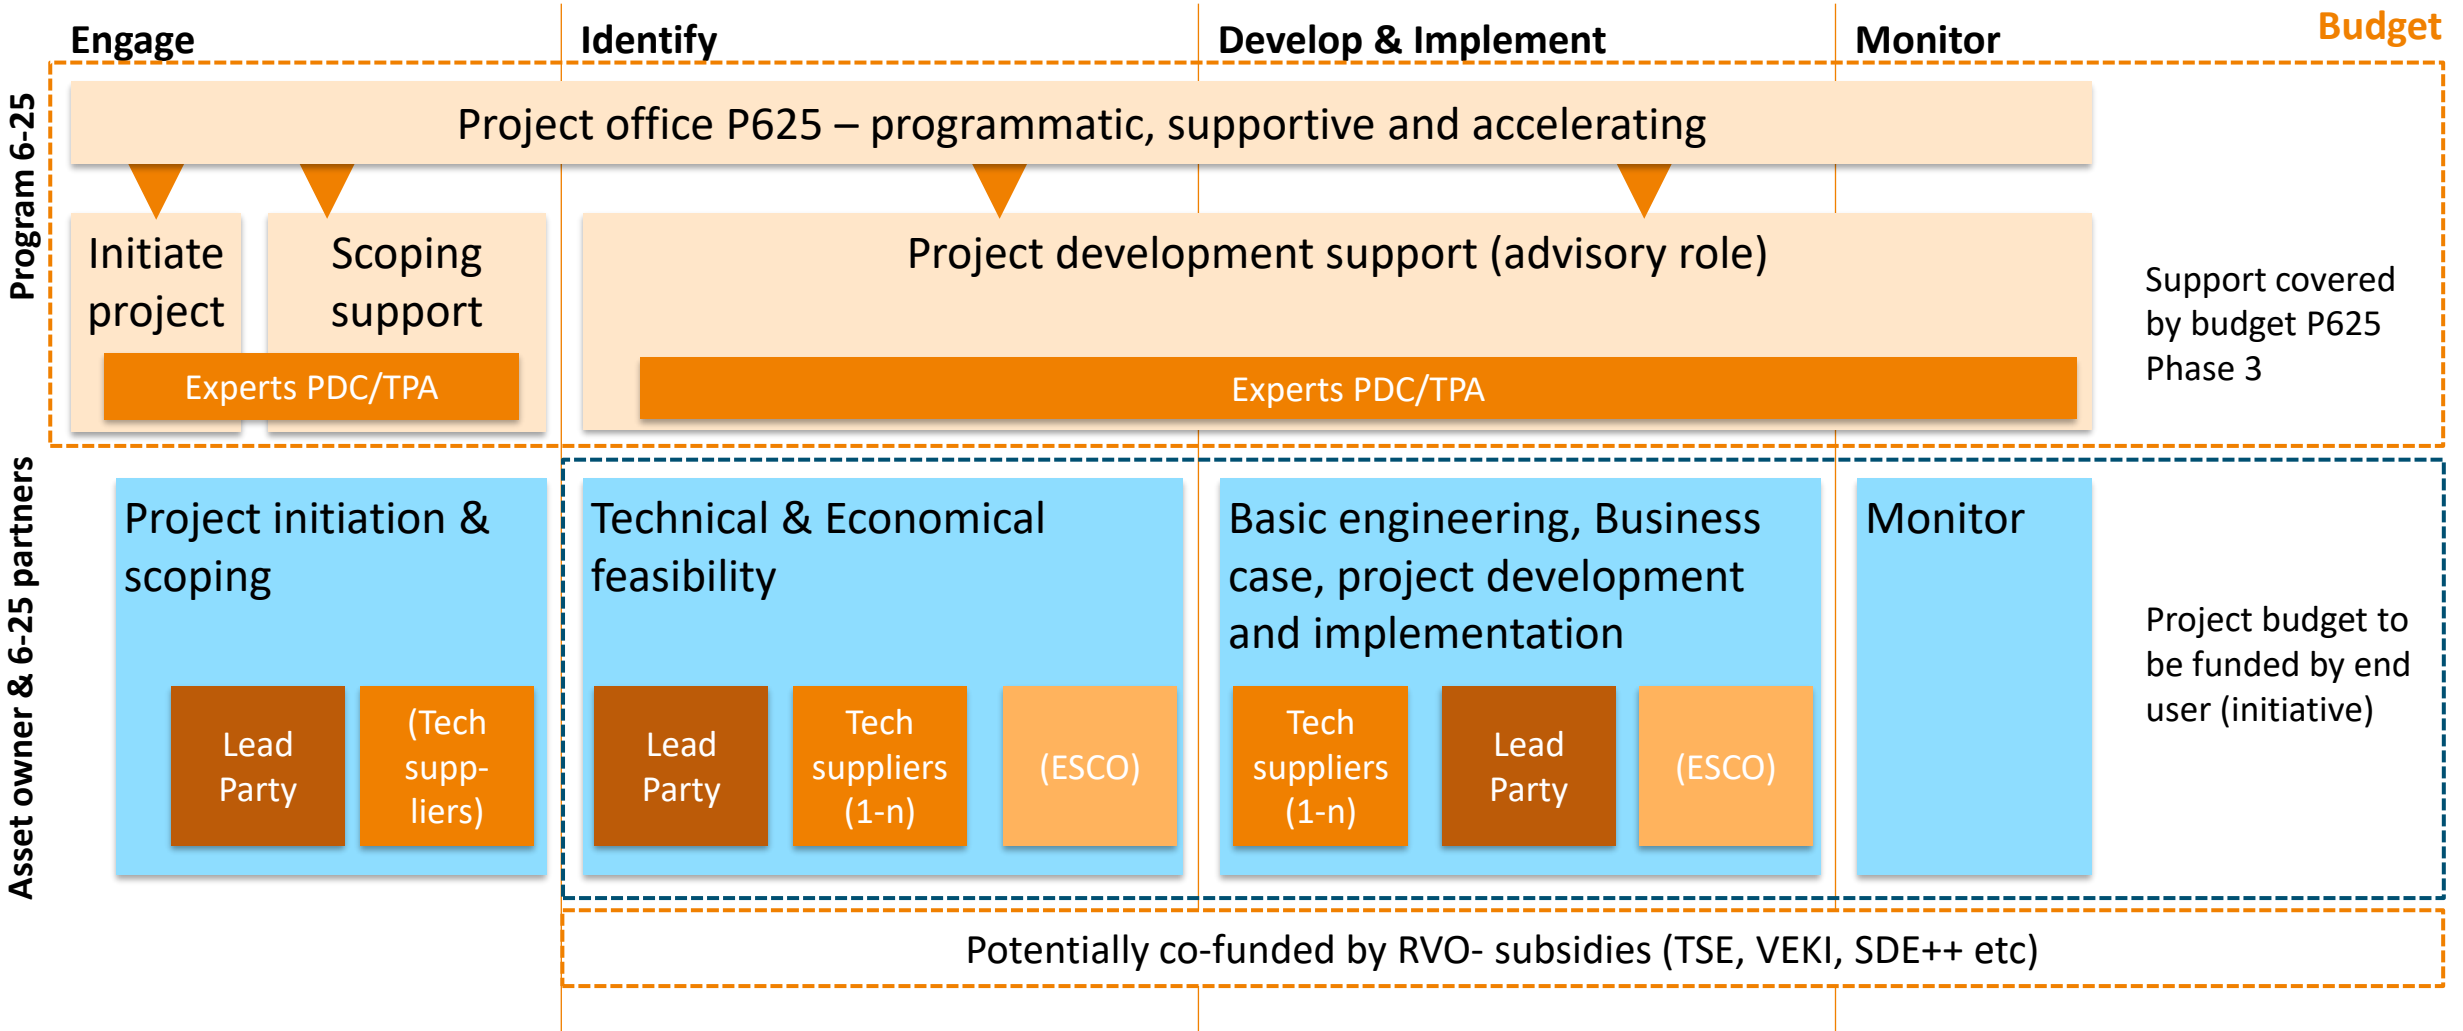

Subsidy risk

1. We facilitate early evaluation of subsidy potential

How? With a programmatic approach we accelerate towards 3 Mton in '25

The ambition is large, we have a solid network of partners to facilitate this

3 Mton
CO₂ reduction
In 2025

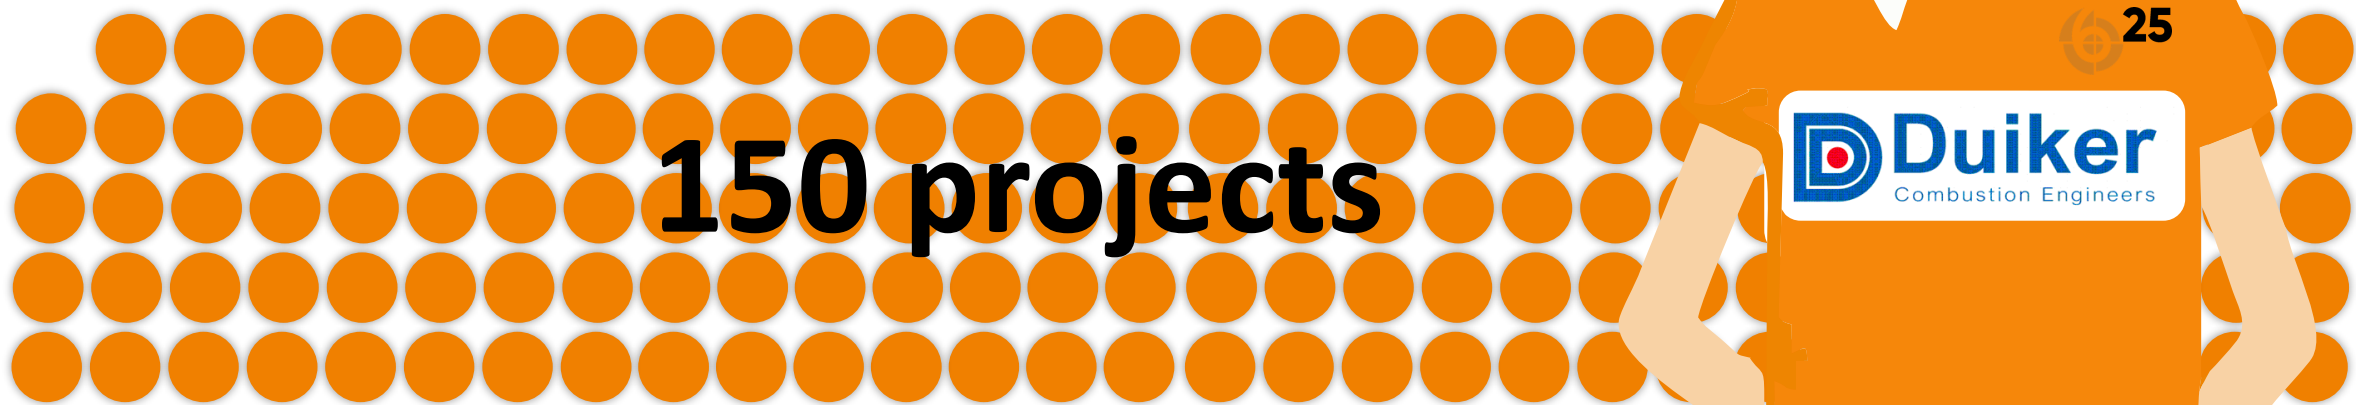

€ 900 mln
investment

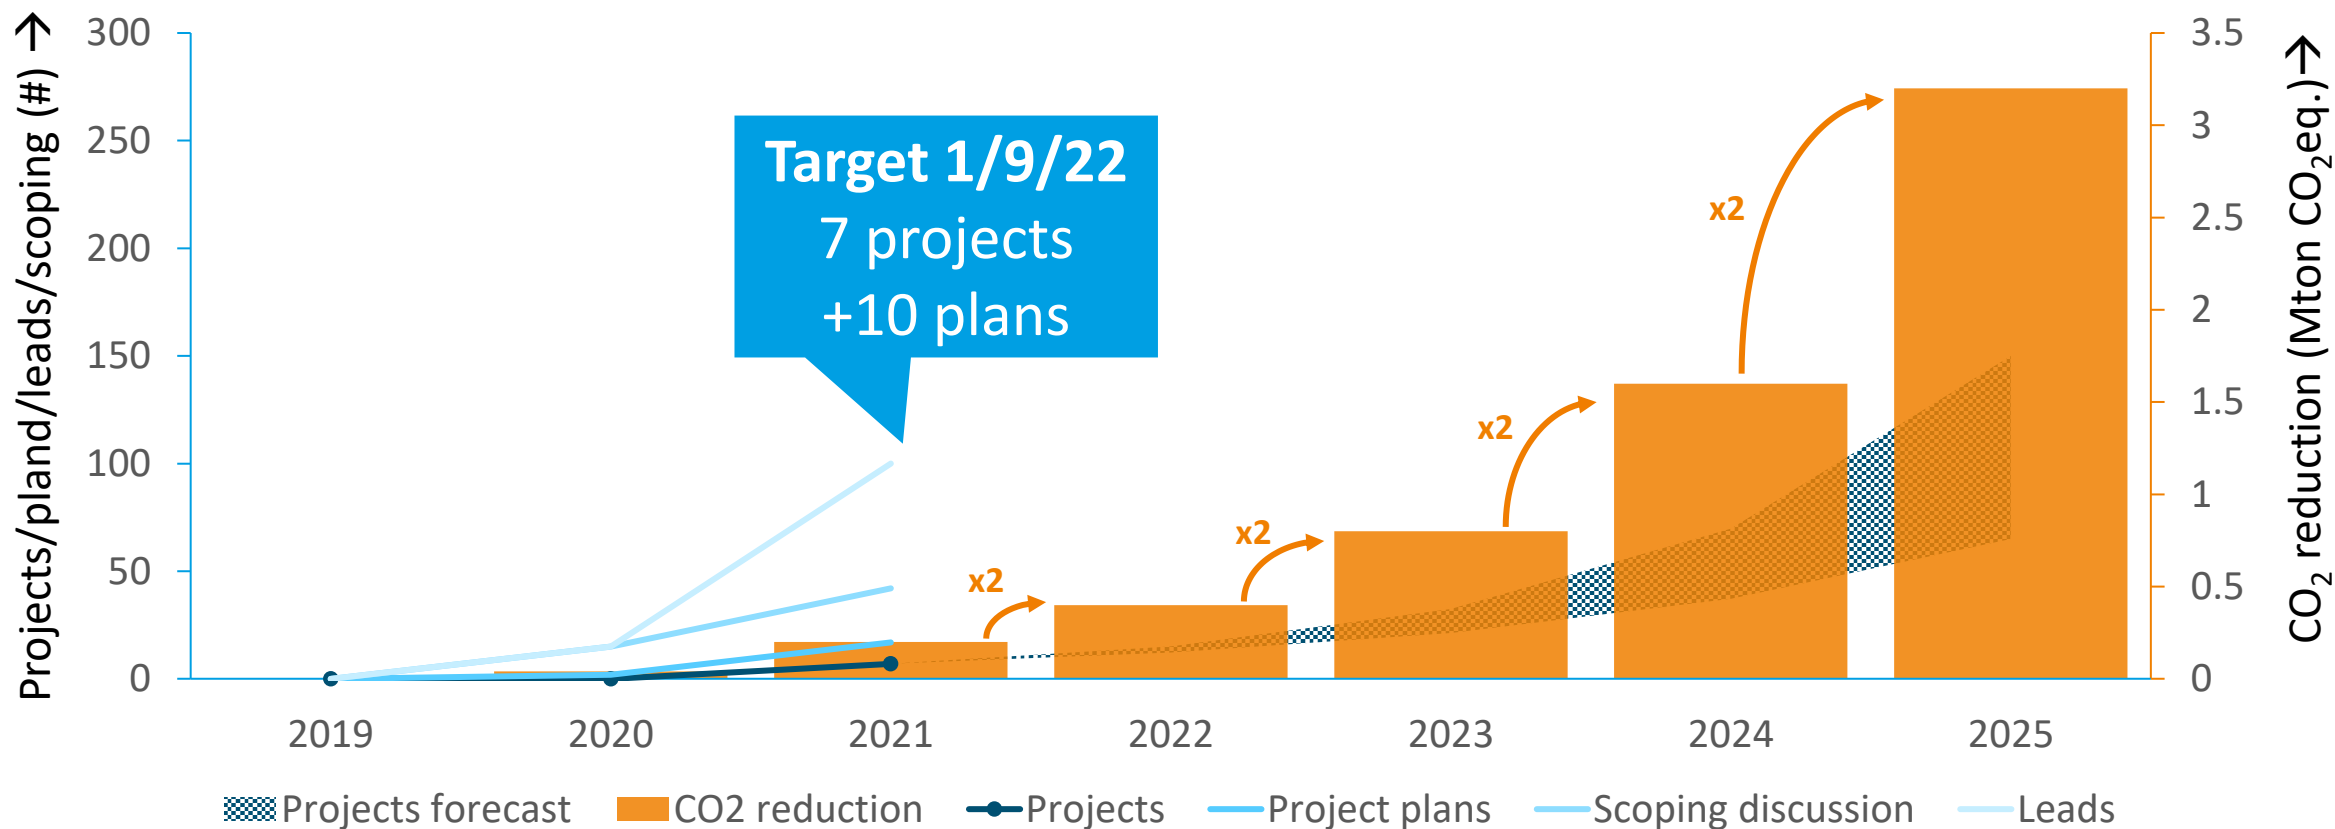

€ 180
mln annual
saving

● ~20 kton per project

This year we will create 7 projects and 10 plans; our target is to double our impact every year
